

Aleksander Jajtuszyk

iOS + AI Product Engineer | Unity Systems Builder

Launched Voice of Self. Building PlanKept. Former Roam AI gameplay/AI systems developer and Alek Games Unity Asset Store founder.

Warsaw, Poland +48 579 518 886 alekjaltuszyk@gmail.com alekjaltuszyk.xyz

PROFILE

Software engineer and independent product builder with a foundation in Swift/SwiftUI, Unity/C#, AI workflows, and behavior-aware product design. Built profitable Unity tools used by developers, worked at Roam AI in San Francisco on text-to-game systems, launched Voice of Self, and now builds PlanKept.

EXPERIENCE

Independent iOS Products

Founder / Engineer
Warsaw, Poland | 2026 - Present

Voice of Self - launched

- Launched a SwiftUI iOS app on the App Store for voice-first personal reflection.
- Built a local-first flow where users speak reflections and the app surfaces recurring worries, resolved worries, and signs of personal growth.
- Implemented staged transcription and AI analysis with deterministic persistence and schema-validated outputs.

PlanKept - in development

- Building a local-first Swift/iOS plan-enforcement and app-blocker product with a public wish-list surface.
- Turns written plans into reminders, app limits or blocks, recurrence, quotas, and proof-based completion review.
- Separates reusable core logic from Apple-specific adapters and treats AI outputs as structured, validated product state.

Roam AI

Gameplay & AI Systems Developer
San Francisco, CA / Warsaw, Poland | 2025 - 2026

- Built gameplay systems for a text-to-game startup: player mechanics, enemy AI, networking, physics interactions, shaders, world-building, and objectives.
- Moved between Unity/gameplay engineering, internal tooling, and urgent AI-driven product problem solving.
- Relocated to San Francisco for direct collaboration with the core engineering team during key development cycles.

Alek Games

Commercial Business Owner / Unity Asset Developer
Warsaw, Poland | Self-employed | 2022 - 2025

- Built and sold 5-star Unity Asset Store tools, including procedural level design systems and VR-oriented frameworks.
- Turned Unity asset development into a profitable technical business with strong user feedback.
- Owned product engineering, documentation, support, pricing, and iteration for developer-facing tools.

CURRENT PRODUCTS

Voice of Self [voiceofself.life](#)

- Voice-first reflection app for people who feel stuck, behind, or unsure whether they are growing.
- Tracks themes and worries from voice reflections, then highlights concerns that keep returning or quietly fade.
- Built around local-first privacy, staged AI analysis, and deterministic persistence rather than generic chat.

SwiftUI

Live App Store app

Local-first

AI analysis

PlanKept [alekjaltuszyk.xyz/apps/PlanKept](#)

- Local-first iPhone app that turns one written goal or boundary into reminders and enforcement flows.
- Supports app limits or blocks, recurring quotas, and proof review before pressure clears.
- Architecture separates reusable core policy from Apple-specific adapters for notifications, Screen Time-style controls, and extensions.

Swift/iOS

In development

Proof review

Durable state

HOW I WORK

- Structure first: clear lifecycles, single sources of truth, and reusable components.
- Fast learning under pressure: self-taught and shipped AI workflow work quickly when a project needed it.
- Human-facing software: tools should be understandable, useful, and hard to misuse.

EDUCATION

XXVIII High School Jan Kochanowski

Computer Science, Mathematics, and Physics extensions. Graduated 2025.

TECHNICAL AREAS

Unity gameplay systems, tools, physics, shaders, world-building, enemy AI, and procedural workflows.

C# modular architecture, internal frameworks, third-party integrations, and reusable production logic.

SwiftUI app architecture, app state, persistence, account/subscription flows, and local data protection.

AI workflows, structured outputs, validation, prompt contracts, and behavior-aware product loops.

LANGUAGES

Polish - native
English - fluent, C1

CLIMBING & INTERESTS

Climbing: max boulder grade 7c; two regional competition wins and many podium finishes.

Strength: one-arm pull-up, front lever, 42 pull-ups in a row.

Interests: game development, applied AI systems, jiu-jitsu.
